

Hey, just to let you know about a little bug:

When you need to validate the save, the program asks you to type enter.

In reality, you must **FIRST** type a letter **THEN** press enter, as shown in the screenshot below, otherwise the program will close itself.

```
Administrateur : Malwprotector Save Tool 1.1
--/!\--ATTENTION--/!\--
ETES-VOUS SUR DE VOULOIR SAUVEGARDER LES REPERTOIRES SUIVANTS:
OneDrive\Bureau
OneDrive\Documents
Downloads
OneDrive\Images
Videos
.
.
VERS:
.
.
e:\MwPR_ST_BACKUP
.
Soyez sûr que votre disque a assez d'espace libre. Toute creation de sauvegarde efface la précédente. Les sous-repertoires ne seront pas sauvegardés.
(Tapez entree pour valider, quittez le programme pour annuler)a
```

Because I've lost the program's source code, this bug will probably never be fixed... But it doesn't stop the program from working.

Remember, you use this program at your own risk and there is absolutely **NO** guarantee that it will work, and I decline all responsibility for **ANY** damage.

Enjoy :p
